

STATEMENTS ON NOTABLE ENERGY DEVELOPMENTS SINCE EWG22

Members at EWG19 agreed to continue presenting a brief written statement updating notable energy developments in their economies at EWG meetings, including progress made in implementing the non-binding energy policy principles and Best Practice Principles for Independent Power Producers that were endorsed by Energy Ministers. Members have recognised that having this item at each EWG meeting is an excellent means of sharing information and deepening understanding of energy issues amongst members.

At EWG19 members further agreed that the Asia Pacific Energy Research Centre could draw on these Statements on Notable Energy Developments to prepare its annual APEC Energy Overview.

Reports to this meeting from Australia; Chile; China; Hong Kong, China; Japan; Mexico; and New Zealand are attached.

No presentations of reports are required at the meeting, but members are encouraged to raise questions or issues, if they wish to do so.

Action Proposed for the Twenty-third Meeting

- Members to note or raise issues on Statements.
